

Agriculture Supply List

The following is a list of supplies students should have at school to be prepared for this class.

1. Class is in the morning, and in the fall and spring the grass will be wet. Rubber boots or work boots will be a good idea to keep your feet dry. Students will be expected to participate no matter how wet the grass is.
2. Work gloves: We will be pulling weeds, building things, and eventually dealing with chickens. If you don't like to get your hands dirty, gloves are good things to bring.
3. Overalls, large clothes, scrubs, anything you may want to put on over your school clothes is a good idea. We don't have time to go to the locker room and change to go outside and then change again after class. We need to get a lot done in a short amount of time, and too many students get distracted by a trip to the locker room.
4. Students need a notebook, folder, and pen/pencil.
5. **Students need to understand we will go outside to work as much as possible; students are responsible to have the necessary clothing for keeping clean and warm. Students who are not prepared for class will not be excused from participating. Not participating will result in a drop in points for the class.**
